

# CORROSION STOP

Powerful washing and corrosion protecting agent for work machines

## Applications:

- specially for corrosion protection of silage making equipment such as forage harvesters and bagging machines
- in general for protection of all corrosion stressed parts in agricultural environment
- suitable for the long term corrosion protection after the farming season as well

## Key Benefits:

### Safe and smart way to corrosion protect your equipment

- contains only feed approved agents
- improve working hygiene by reducing acid odour
- decreases the maintenance cost
- increases the exchange value and life cycle of your equipment

## Instructions for use:

### Dilute with tap water 1 : 3.

- 1 part of Corrosion Stop (concentrate) and 3 parts of tap water
- mix before use

**Wash all surfaces thoroughly as soon as possible after the silage preservative treatment.**

**Do not wash the surfaces with pure water.**

- water washing will immediately initiate corrosion

If equipment is fully covered with fodder, add Corrosion Stop concentrate into washing water i.e. (1 : 9).

**For corrosion protection after the farming season:**

**Use Corrosion Stop concentrate as such.**
